

# Maersk Supply Service

## Moorings Management

Maersk Supply Service provides full-scope solutions for moorings management using our large, globally-stationed fleet as well as project management and engineering capabilities to de-risk the management of mooring systems throughout life of field.

### One centralised team

We provide project management and engineering, as well as manage all project interfaces. Offshore work is carried out by our experienced crew who have been involved during planning to ensure the solution is optimised from the marine perspective. With Maersk Supply Service providing both project management and execution, our moorings management solutions are delivered from one centralised team.

### Full- scope solutions

We plan and execute the full range of scopes required for moorings installation and maintenance, supplying all vessels required from our in-house fleet of over 40 vessels. Maersk Supply Service operates the most extensive fleet of large AHTS vessels among solutions providers, as well as versatile subsea construction vessels.

# Delivery Models

Maersk Supply Service provides full-scope solutions for moorings management using our large, globally-stationed fleet as well as project management and engineering capabilities to de-risk the management of mooring systems throughout life of field.

Moorings management begins with installation. Combining the moorings management programme with the installation scope creates both cost and operational efficiencies. This method allows the same team that delivered the installation to approach inspection and maintenance with pre-existing knowledge of the mooring system. For more information on our towing and mooring installation solutions, please visit [www.maersksupplyservice.com/integrated-solutions](http://www.maersksupplyservice.com/integrated-solutions).

## Moorings inspection, maintenance and repair services

Moorings system operations

Moorings lines change out

Flexible riser inspection

Station-keeping services

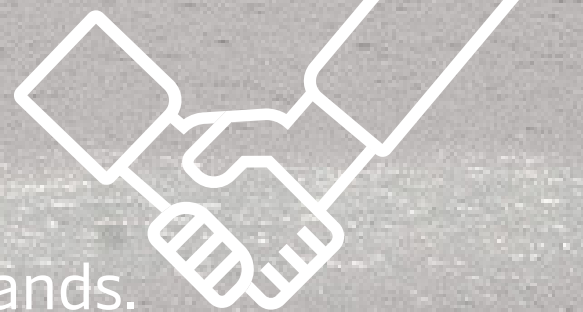

Hull/ uwild inspection

We recognise that one size does not fit all, and for that reason provide a custom engineering solution for each asset and its needs. With each project delivery, we maintain a strong focus on cost and fuel efficiency in all our planning and operations. We maintain a flexible set up where we are able to utilise in-house capabilities and our trusted third-party partners or can contract in preferred subcontractors of our customers where required.

# Global Operations

We have the capability to support our customers with strong local content globally. With a selection of vessels always within close proximity to our customers' operations, we are able to react quickly and minimise mobilisation time to provide one-off or urgent moorings management solutions. Our fleet is stationed around the world and our operations are supported from local offices in Angola, Australia, Brazil, Canada, Denmark, Ghana, Guyana, Mexico, Norway, Philippines, Singapore and United Kingdom.

Safe hands.  
Sound business.
